Contents

Preface *xiii*

List of Abbreviations *xvii*

Part I Introduction *1*

1 Introduction *3*
1.1 Introduction to Biomechanics *3*
1.2 Biology and Biomechanics *3*
1.3 Types of Biological Systems *6*
1.3.1 Biosolids *6*
1.3.2 Biofluids *7*
1.3.3 Biomolecules *8*
1.3.4 Synthesized Biosystems *9*
1.4 Biomechanical Hierarchy *10*
1.4.1 Organ Level *10*
1.4.2 Tissue Level *11*
1.4.3 Cellular and Lower Levels *12*
1.4.4 Complex Medical Procedures *13*
1.5 Multiscale/Multiphysics Analysis *13*
1.6 Scope of the Book *17*

Part II Analytical and Numerical Bases *21*

2 Theoretical Bases of Continuum Mechanics *23*
2.1 Introduction *23*
2.2 Solid Mechanics *23*
2.2.1 Elasticity *24*
2.2.2 Plasticity *28*
2.2.3 Damage Mechanics *31*
2.2.4 Fracture Mechanics *36*

2.2.5 Viscoelasticity *53*
2.2.6 Poroelasticity *59*
2.2.7 Large Deformation *63*
2.3 Flow, Convection and Diffusion *72*
2.3.1 Thermodynamics *72*
2.3.2 Fluid Mechanics *74*
2.3.3 Gas Dynamics *78*
2.3.4 Diffusion and Convection *81*
2.4 Fluid–Structure Interaction *83*
2.4.1 Lagrangian and Eulerian Descriptions *83*
2.4.2 Fluid–Solid Interface Boundary Conditions *84*
2.4.3 Governing Equations in the Eulerian Description *85*
2.4.4 Coupled Lagrangian–Eulerian (CLE) *86*
2.4.5 Coupled Lagrangian–Lagrangian (CLL) *87*
2.4.6 Arbitrary Lagrangian–Eulerian (ALE) *88*

3 Numerical Methods *93*
3.1 Introduction *93*
3.2 Finite Difference Method (FDM) *93*
3.2.1 One-Dimensional FDM *94*
3.2.2 Higher Order One-Dimensional FDM *95*
3.2.3 FDM for Solving Partial Differential Equations *98*
3.3 Finite Volume Method (FVM) *99*
3.4 Finite Element Method (FEM) *102*
3.4.1 Basics of FEM Interpolation *102*
3.4.2 FEM Basis Functions/Shape Functions *103*
3.4.3 Properties of the Finite Element Interpolation *105*
3.4.4 Physical and Parametric Coordinate Systems *106*
3.4.5 Main Types of Finite Elements *106*
3.4.6 Governing Equations of the Boundary Value Problem *109*
3.4.7 Numerical Integration *112*
3.5 Extended Finite Element Method (XFEM) *113*
3.5.1 A Review of XFEM Development *113*
3.5.2 Partition of Unity *114*
3.5.3 Enrichments *115*
3.5.4 Signed Distance Function *115*
3.5.5 XFEM Approximation for Cracked Elements *115*
3.5.6 Boundary Value Problem for a Cracked Body *117*
3.5.7 XFEM Discretisation of the Governing Equation *118*
3.5.8 Numerical Integration *119*
3.5.9 Selection of Enrichment Nodes for Crack Propagation *121*
3.5.10 Incompatible Modes of XFEM Enrichments *122*
3.5.11 The Level Set Method for Tracking Moving Boundaries *123*
3.5.12 XFEM Tip Enrichments *124*
3.5.13 XFEM Enrichment Formulation for Large Deformation Problems *132*

3.6 Extended Isogeometric Analysis (XIGA) *133*
3.6.1 Introduction *133*
3.6.2 Isogeometric Analysis *133*
3.6.3 Extended Isogeometric Analysis (XIGA) *136*
3.6.4 XIGA Governing Equations *138*
3.6.5 Numerical Integration *140*
3.7 Meshless Methods *142*
3.7.1 Why Going Meshless *142*
3.7.2 Meshless Approximations *143*
3.7.3 Meshless Solutions for the Boundary Value Problems *158*
3.8 Variable Node Element (VNE) *166*

4 Multiscale Methods *171*
4.1 Introduction *171*
4.2 Homogenization Methods *172*
4.2.1 Introduction *172*
4.2.2 Representative Volume Element (RVE) *173*
4.2.3 Mathematical Homogenization *174*
4.2.4 Computational Homogenization *181*
4.3 Molecular Dynamics (MD) *195*
4.3.1 Introduction *195*
4.3.2 Statistical Mechanics *196*
4.3.3 MD Equations of Motion *211*
4.3.4 Models for Atomic Interactions – MD Potentials *215*
4.3.5 Measures for Determining the State of MD Systems *222*
4.3.6 Stress Computation in MD *223*
4.3.7 Molecular Statics *226*
4.3.8 Sample MD Simulation of a Polymer *227*
4.4 Sequential Multiscale Method *229*
4.4.1 Introduction *229*
4.4.2 Multiscale Modelling of CNT Reinforced Concrete *230*
4.4.3 Molecular Dynamics Simulation of CNTs *231*
4.4.4 Simulation of CNT-Reinforced Calcium Silicate Hydrate *242*
4.4.5 Micromechanical Simulation of CNT-Reinforced Cement *247*
4.4.6 Mesoscale Simulation of CNT-Reinforced Concrete *250*
4.4.7 Macroscale Simulation of CNT-Reinforced Concrete *256*
4.5 Concurrent Multiscale Methods *258*
4.5.1 Introduction *258*
4.5.2 Quasi-Continuum Method (QC) *260*
4.5.3 Bridging Domain Method (BDM) *267*
4.5.4 Bridging Scale Method (BSM) *271*
4.5.5 Disordered Concurrent Multiscale Method (DCMM) *272*
4.5.6 Variable Node Multiscale Method (VNMM) *281*
4.5.7 Enriched Multiscale Method (EMM) *288*

Part III Biomechanical Simulations *297*

5 Biomechanics of Soft Tissues *299*
5.1 Introduction *299*
5.2 Physiology of Soft Tissues *300*
5.2.1 Soft Tissues, Skin *300*
5.2.2 Artery *303*
5.2.3 Heart Leaflet *303*
5.2.4 Brain Tissue *304*
5.3 Hyperelastic Models of Soft Tissues *305*
5.3.1 Introduction *305*
5.3.2 Description of Deformation and Definition of Invariants *307*
5.3.3 Isotropic neo-Hookean Hyperelastic Model *309*
5.3.4 Isotropic Mooney–Rivlin Hyperelastic Model *312*
5.3.5 Hyperelastic Models for Multiscale Simulation of Tendon *313*
5.3.6 Anisotropic Hyperelastic Models for Fibrous Tissues *316*
5.3.7 Polyconvex Undamaged Functions for Fibrous Tissues *319*
5.3.8 Damaged Soft Tissue *321*
5.4 Multiscale Modelling of Undamaged Tendon *328*
5.4.1 Fibril Scale *330*
5.4.2 Fibre Scale *330*
5.4.3 Tissue Scale *332*
5.5 Multiscale Analysis of a Human Aortic Heart Valve *336*
5.5.1 Introduction *336*
5.5.2 Organ Scale Simulation *337*
5.5.3 Simulation in the Tissue Scale *342*
5.5.4 Cell Scale Analysis *347*
5.6 Modelling of Ligament Damage *349*
5.7 Modelling of the Peeling Test: Dissection of the Medial Tissue *355*
5.8 Healing in Damaged Soft Tissue *359*
5.8.1 Introduction *359*
5.8.2 Physical Foundation of Tissue Healing *360*
5.8.3 Solution Procedure *369*
5.8.4 Numerical Analysis *372*
5.9 Hierarchical Multiscale Modelling of a Degraded Arterial Wall *383*
5.9.1 Definition of the Problem *383*
5.9.2 Multiscale Model *387*
5.9.3 Hyperelastic Material Models *389*
5.9.4 Computational Framework of the Hierarchical Multiscale Homogenization *390*
5.9.5 Numerical Results *394*
5.10 Multiscale Modelling of the Brain *401*
5.10.1 Introduction *401*
5.10.2 Biomechanics of the Brain *402*
5.10.3 Multiscale Modelling of the Brain (neo-Hookean Model) *403*
5.10.4 Viscoelastic Modelling of the Brain *414*

6 Biomechanics of Hard Tissues *423*
6.1 Introduction *423*
6.1.1 Hard Tissues *423*
6.1.2 Chemical Composition of Bone *423*
6.1.3 Multiscale Structure of Bone *423*
6.1.4 Bone Remodelling *428*
6.1.5 Contents of the Chapter *429*
6.2 Concepts of Fracture Analysis of Hard Tissues *429*
6.2.1 Numerical Studies of Bone Fracture *430*
6.2.2 Constitutive Response of the Bone *433*
6.2.3 Poroelastic Nature of Bone Tissues *433*
6.2.4 Plasticity and Damage *433*
6.2.5 Hyperelastic Response *435*
6.3 Simulation of the Femur Bone at Multiple Scales *435*
6.3.1 Microscale Simulation of the Trabecular Bone *436*
6.3.2 Two-dimensional XFEM Mesoscale Fracture Simulation of the Cortical Bone *437*
6.3.3 Macroscale Simulation of the Femur *443*
6.4 Healing in Damaged Hard Tissue *446*
6.4.1 Introduction *446*
6.4.2 Physical Foundation of Bone Tissue Healing *448*
6.4.3 Solution Procedure *455*
6.4.4 Numerical Analysis *458*

7 Supplementary Topics *467*
7.1 Introduction *467*
7.2 Shape Memory Alloy (SMA) Stenting of an Artery *468*
7.2.1 Stenting Procedures *468*
7.2.2 SMA Constitutive Equations *469*
7.2.3 Contact Mechanics *471*
7.2.4 Modelling of Stenting *471*
7.2.5 Basics of Modelling *472*
7.3 Multiscale Modelling of the Eye *474*
7.4 Pulsatile Blood Flow in the Aorta *477*
7.4.1 Description of the Problem *477*
7.5 Shape Memory Polymer Drug Delivery System *479*
7.6 Artificial Intelligence in Biomechanics *483*
7.6.1 Artificial Intelligence and Machine Learning *483*
7.6.2 Deep Learning *484*
7.6.3 Physics-Informed Neural Networks (PINNs) *485*
7.6.4 Biomechanical Applications of Artificial Intelligence *487*

References *489*
